## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-23, drawn to a data-retention circuitry including master-slave latches and a feedback loop, classified in class 327, subclass 202.
  - II. Claims 24-26, drawn to a wireless communication device comprising: an omni directional antenna to communicate radio-frequency signals, classified in class 455, subclass 562.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05 (c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because each group can function without the particulars of the other group. The subcombination has separate utility such as a wireless communication device comprising: an omni directional antenna to communicate radio-frequency signals.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2681

4. Because these inventions are distinct for the reasons given above and the search required for Group I. is not required for Group II. restriction for examination purposes as indicated is proper.
